

## BRACES THAT DON'T SHOW.....INVISIBLE BRACES

The Department of Orthodontics, BBDCODS, BBD University organized a two day Lecture and Hands on Course on Lingual Orthodontics on 28<sup>th</sup> & 29<sup>th</sup> September 2016. As per the organizing chairperson Dr Tripti Tikku, Prof & Head of Department of Orthodontics, BBDCODS , lingual orthodontics is a technique in which braces are placed behind the teeth, rather than in front, and offer a great cosmetic alternative for those who want their crooked teeth straightened, without the braces being visible while smiling or talking. It is helpful for the girls who seek orthodontic treatment while their marriage negotiations are going on. Not all orthodontists offer lingual braces as an alternative for Orthodontic treatment as special training and technical expertise are needed for this technique, for which Dr Surya Kanta Das from Odisha trained the post graduate students from all over India, even as far as from Chennai.
